## WELCOME USE TORRENTVALID

Instantly download certkingdom pdf study torrent for successfully pass

Input your exam code ...

Our certkingdom pdf dumps are the best exam preparation study material for all of you. You can try three different versions of certkingdom free download demo and do your decision. Our exam pdf training can boost your personal ability for 100% pass.

### Why Choose Us

#### Quality and Value

CertkingdomPDF Practice Exams are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development - no all dumps.

#### Tested and Approved

We are committed to the process of vendor and third party approvals. We believe professionals and executives alike deserve the confidence of quality coverage these authorizations provide.

#### Easy to Pass

If you prepare for the exams using our CertkingdomPDF testing engine, it is easy to succeed for all certifications in the first attempt. You don't have to deal with all dumps or any free torrent / rapidshare all stuff.

#### Try Before Buy

CertkingdomPDF offers free demo of each product. You can check out the interface, question quality and usability of our practice exams before you decide to buy.

The Latest and Valid Exam Torrent is the right material for Passing the Actual Test

**Exam** : **HCE-3710**

**Title** : Hitachi Vantara Certified  
Expert - Replication Solutions  
Architect

**Vendor** : Hitachi

**Version** : DEMO

**NO.1** A customer wants to replicate between two HUS 150 arrays. The business requires a 30 minute RPO.

The available bandwidth is less than the peak write workload. Which replication product is appropriate?

Response:

- A. TrueCopy Extended Distance
- B. mediated point-in-time copy
- C. Hitachi Universal Replicator
- D. TrueCopy

**Answer:** A

**NO.2** A customer is implementing a single ShadowImagecopy of 10 TB of storage on a VSP. How much storage must be provided for the secondary volumes (S-Vols)?

Response:

- A. 20 TB
- B. 10 TB
- C. 0 TB
- D. 40 TB

**Answer:** B

**NO.3** A customer's production facilities are located several hundred kilometers apart. The customer is cost conscious and wants to reduce recurring expenses.

Which two replication strategies would be used to balance recoverability versus bandwidth costs? (Choose two.)

Response:

- A. synchronous replication
- B. journal-based asynchronous replication
- C. in-system replication to virtualized storage
- D. mediated point-in-time copy replication

**Answer:** B,D

**NO.4** A customer implements TrueCopy replication for an active OLTP database and users begin to complain about database response time.

The customer is running Fiber Channel over DWDM and the peak write workload only consumes half of the available bandwidth on the link.

Which factor affects the database response time?

Response:

- A. Cache configurations of the RCU and MCU do not match.
- B. The distance between the sites is too great for Fiber Channel to maintain session
- C. The distance between the sites introduces too much latency.
- D. Insufficient MCU cache has activated inflow control.

**Answer:** C

**NO.5** A customer is conducting a test and has performed a planned failover to their Hitachi Universal

Replicator copies at the secondary site. They have confirmed their recovery capabilities and they are ready to return operations to the production site.

Which fallback procedure applies?

Response:

- A. Replication pairs must be suspended to allow changed tracks to be managed using the bitmap.
- B. Replication direction can be reversed without need for a full initial copy.
- C. A full initial copy will be required from the recovery storage back to the primary storage.
- D. Copy pace should be reduced until the resync copy is complete.

**Answer:** B

**NO.6** A customer has a HUS 130 array and wants an asynchronous solution. The customer needs to understand which factors influence the TrueCopy Extended Distance cycle time.

Which two factors should be considered?

(Choose two.)

Response:

- A. when splitting the pairs, the S-Vol will wait until the next update cycle so a reduced cycle time is important
- B. the maximum amount of data loss the operation could survive during a disaster
- C. the amount of data written to the P-Vol
- D. reduced cycle time will always reduce your RPO

**Answer:** B,C

**NO.7** A customer has stated several disaster recovery objectives. The acceptable data loss is 4 hours. They must have their systems operational within 7 hours of a disaster. They must also have three copies of the data at the recovery site.

What is the customer's recovery point objective?

Response:

- A. 3 hours
- B. 7 hours
- C. 11 hours
- D. 4 hours

**Answer:** D
